

Fare Logistics Data Reporting

This data reporting software puts the powerful data collection features of Fare Logistics' electronic fare collection systems at your fingertips. Designed specifically for the transit industry, our database lets you automatically store and organize your fleet and ridership data. Even lost or stolen cards can be tracked and while the system boasts automatic data collection and download it also has the capability of manual override when required.

The most impressive feature of Fare Logistics' Reporting Software is undoubtedly its flexibility. Beyond a wide range of standard reports, our system has the added freedom and flexibility of further analysis through the creation of a wide range of highly professional customized reports. These reports cover many aspects of fleet utilization and fleet management not available through the standard reports.

The graphic user interface has been redesigned and coded by the newest Microsoft development platform. It is more Windows XP oriented, transparent and straightforward so that all the technical details are handled in the background by the program.

Features:

- Static or dynamic crystal reports can be generated by a mouse click;
- Transactions can be traced and modified;
- Automatic data collection through wireless or wired connections;
- Card management functionalities for a smart card solution;
- Flexible configurability; and
- Add-on tools.

Specifications:

- Uses Microsoft SQL 2005 Server as a database;
- Runs on Windows 2000, XP, 2003 Platforms;
- Reports can be exported to multiple formats (pdf, doc, xls etc.);
- Manages data from all Fare Logistics fare collection equipment.
